# Global Seaweed Production

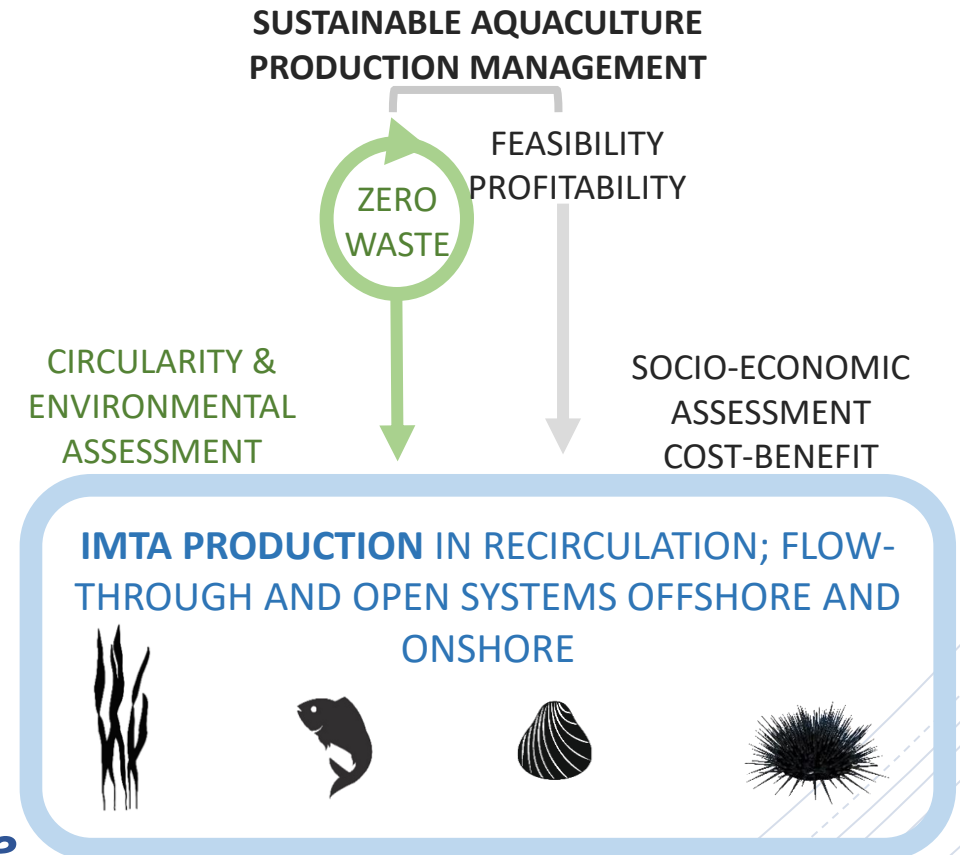

Global production of cultivated and wild harvested algae between 1950 and 2017 (from FAO 2018)

# IMAQT (Intelligent Management System for IMTA) and ASTRAL

- **Sensors to improve management of IMTA sites- ASTRAL builds on this from IMPAQT**
- **Zero Waste in Aquaculture-valorisation routes; best practice**
- **Circularity Assessment**  
*feed waste, species by-product use, recirculation*
- **Environmental Assessment**  
*life cycle perspective*
- **Eco-Value Chain Standards**  
*regulatory framework, requirements for compliance*

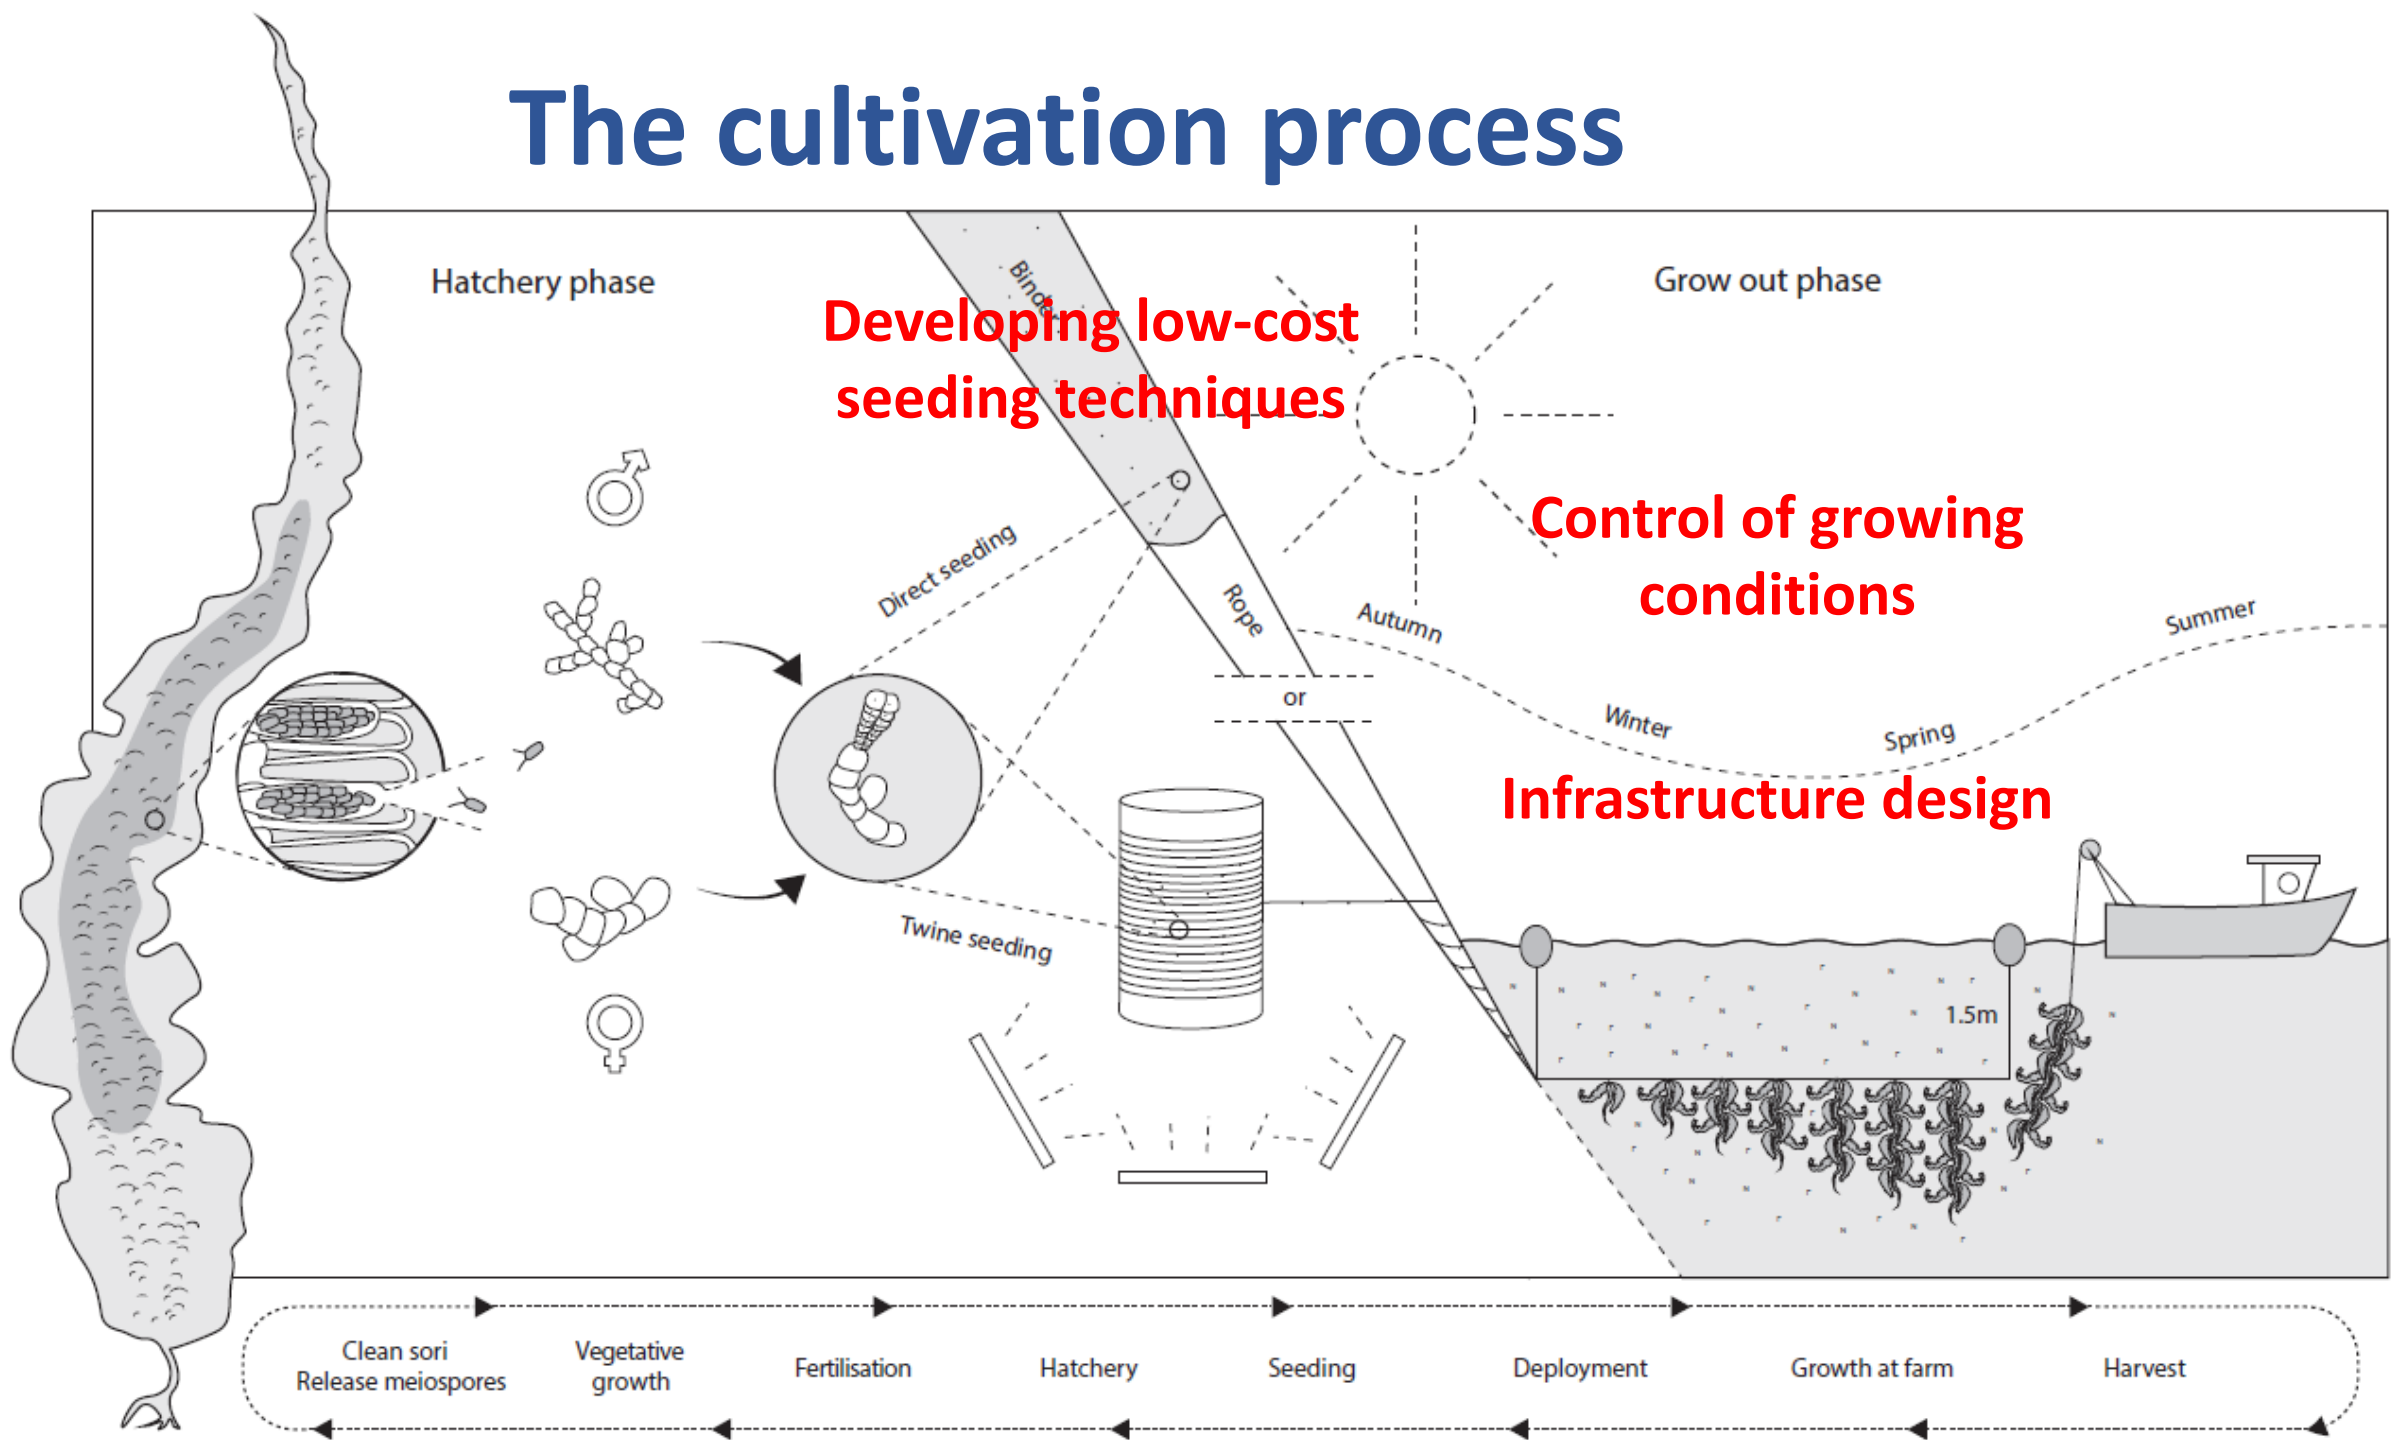

# SAMS IMTA Lab

- **Develop new IMTA value chains**
- **“Reduce – Reuse – Recycle”**  
*reduce plastics, polypropylene rope, steel*
- **Adjust cultivation practices**  
*rope diameter vs biomass yield, seeding- & stocking density,*  
*sustainable polymers: biodegradable (e.g. hemp rope) or recyclable*

# The cultivation process

# Key Activities:

- Develop and validate on integrated oyster/seaweed cultivation system with improved stocking density. Comparing oyster growth rate, composition and mortality to an intertidal site.

A. Top View

B. Side View

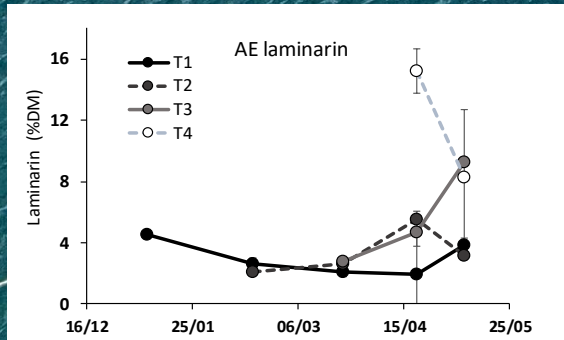

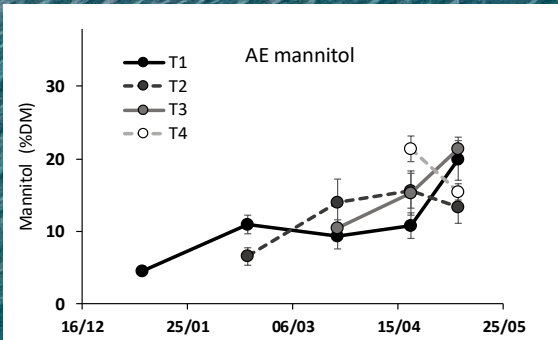

oyster-seaweed cultivation system aims to test a combined native oyster and seaweed cultivation system by exploiting the buoyancy built into the oyster baskets creating two permanent catenary lines held at 1.5m water depth and 8m apart.

# Key Activities:

- Monitoring growth rate, yield, mortality (oysters) and composition throughout the year and relating this to environmental monitoring to inform best practice

Mannitol and Laminarin as percentage dry weight of samples of *Alaria esculenta* (AE) sampled from 08/01 until harvest. Seaweed deployments dates are T1 - 06/10/16; T2 - 24/11/16, T3 - 08/01/17, T4 - 17/02/17, T5 - 23/03/17. Unpublished data.

# Aquaculture Monitoring

- Transition to **AUTONOMOUS REAL-TIME** data collection

# Monitoring for Management

- suite of parameters
- data every 15min

## Seaweed Performance

- ✓ Biomass yield
- ✓ Morphology & Biofouling
- ✓ Composition
- ✓ Carbohydrates
- ✓ Heavy Metals

Etc.

## Crop Performance ~ Cultivation Environment

Q: Optimum Harvest Time for Seaweed?

# 'Low-Cost' Kits for Aquaculture

- **new sensors and improve existing ones**  
*identify relevant parameters & technology*  
*prototyped for e.g. biosensors, microplastics*
- **Technology integration in IoT kits**  
*cloud-based data management*
- **low-cost A.I. vision sensor & algorithm**  
*biomass estimation, phytoplankton*
- **A.I. data science platform**  
*predictive modelling*

**Integration &  
Validation in  
IMTA Labs and  
pilots**

This project has received funding from the EU H2020 research and innovation programme under Grant Agreement No 774109

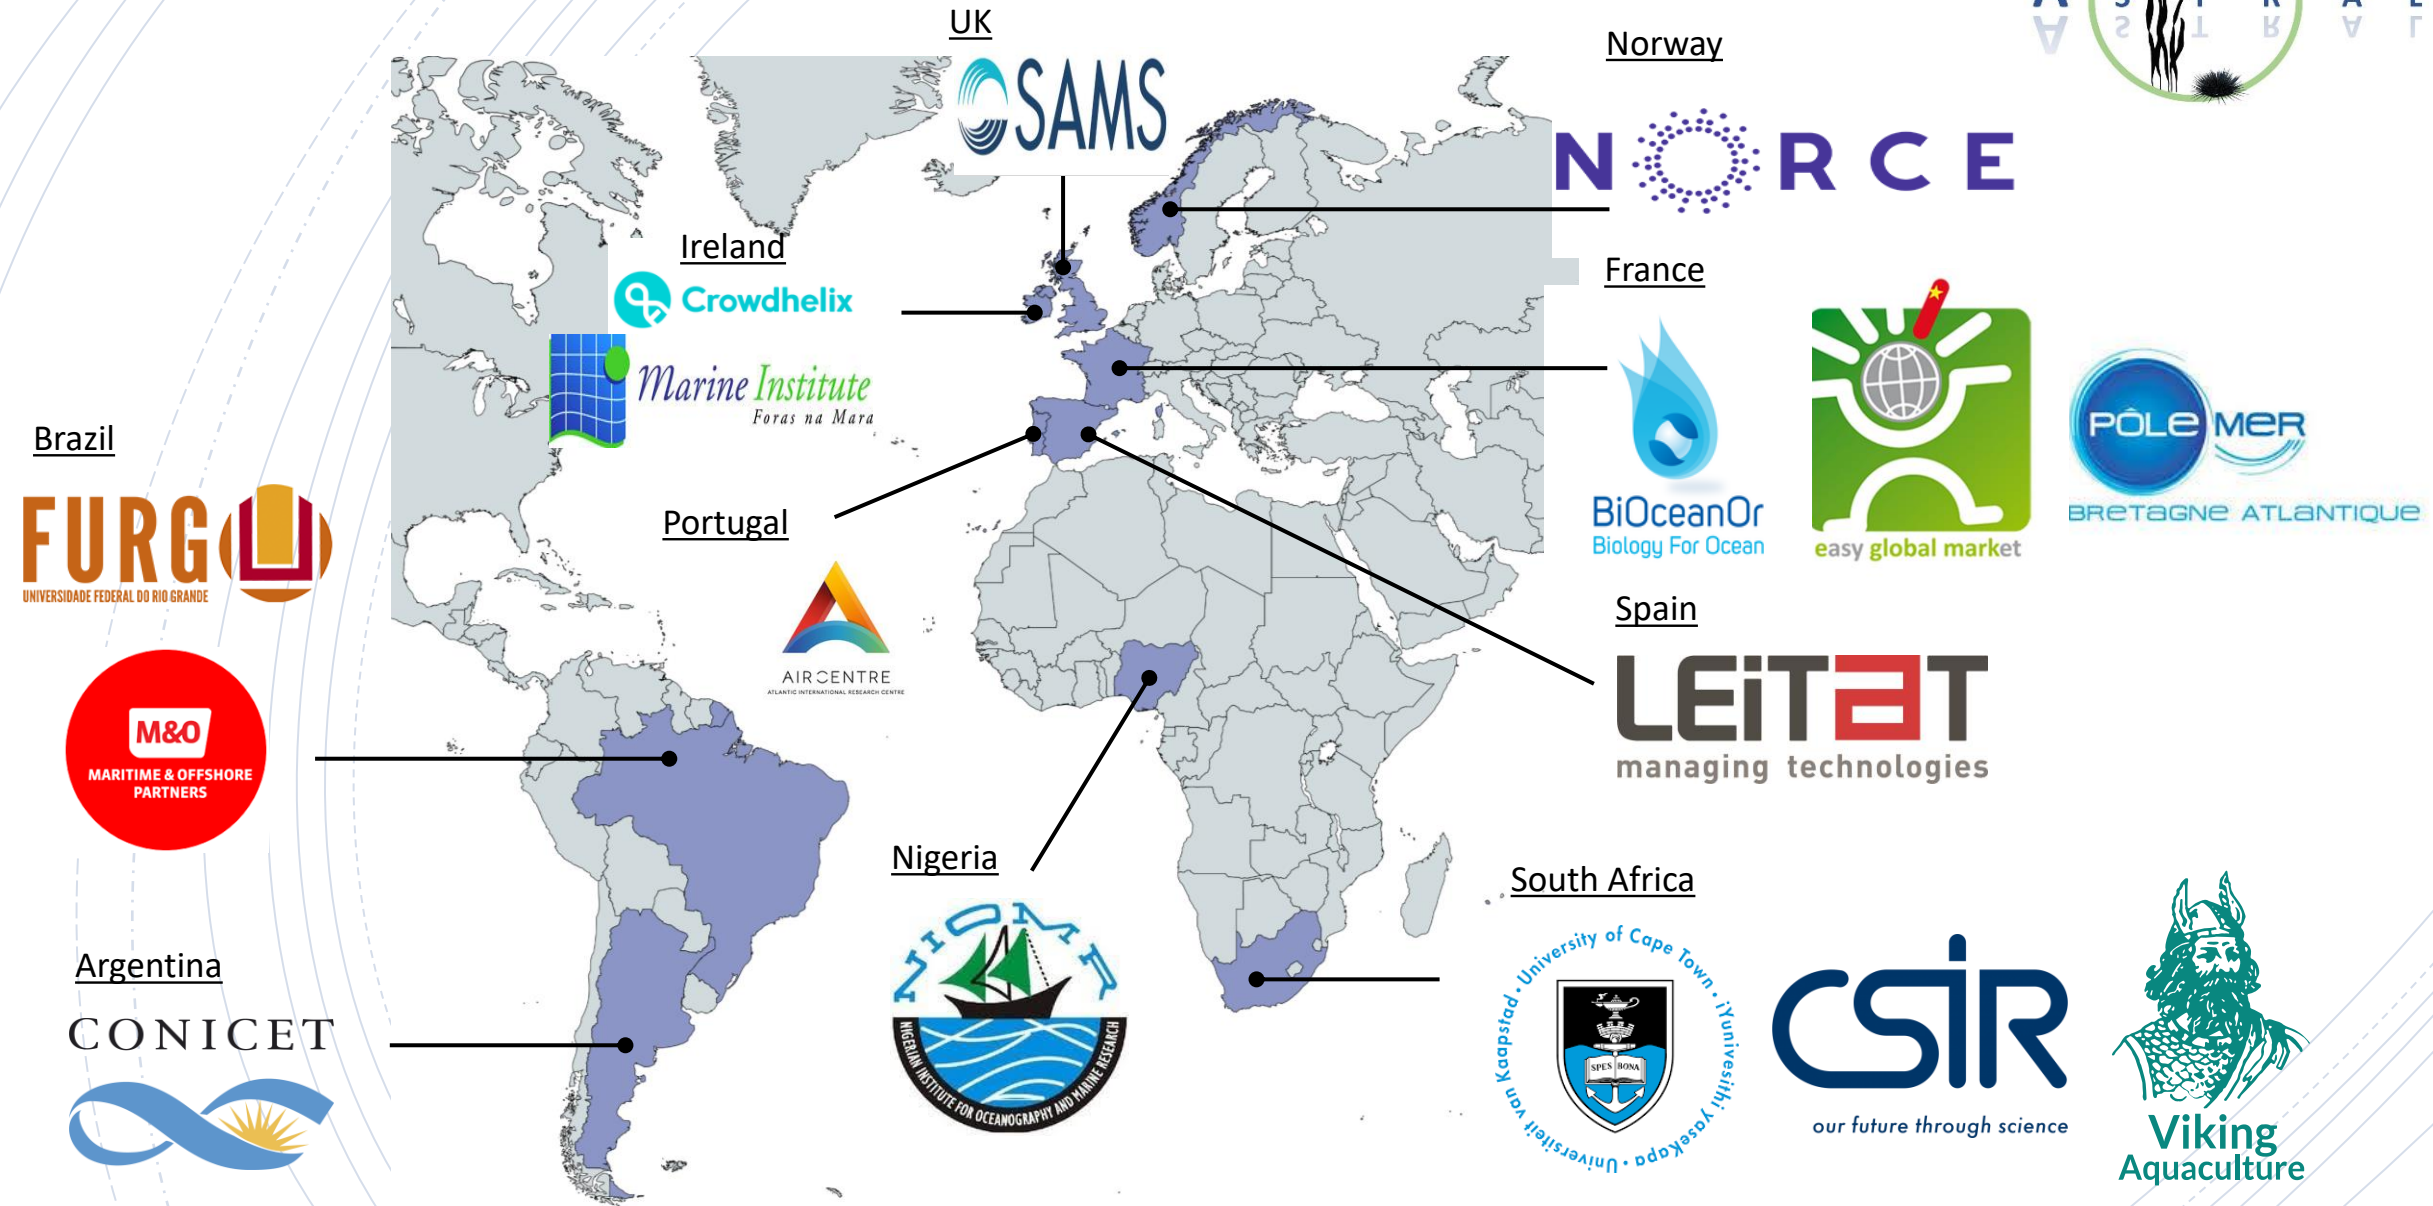

# IMPACT

Intelligent Management System for  
Integrated Multi-trophic Aquaculture

# The ASTRAL Consortium

# Thank you!

Professor Michele Stanley
